EXECUTIVE SUMMARY

The DTAF documentation is organized as a series of complementary documents that guide users from understanding the motivation behind the framework to applying it in practice.

- **Document 1**: Introduction to DTAF introduces the purpose and value of the Digital Twin Analytical Framework.
- **Document 2**: Quick-Start Guide provides step-by-step instructions for downloading and setting up the DTAF AI Pipeline.
- **Document 3:** Full DTAF Case Study walks users through a complete application of the framework using a CNC machining example and includes answers to frequently asked questions.
- **Document 4**: Full DEMA + CNC Case Study provides a detailed walkthrough of the Data Element Mapping and Analysis (DEMA) methodology, using the same case study, and offers additional background on the data preparation process.
- **Document 5:** DTAF Quick Demo summarizes the minimum inputs required to demonstrate the pipeline quickly.
- **Document 6**: Supporting Materials contains detailed descriptions of the frameworks that comprise DTAF, along with supporting references.
- **DTAF One-Pager** provides a concise overview of the framework and serves as a marketing and outreach resource.
